RE: Adirondack Forest Preserve Ski Touring Trail Development Guidelines

Dear Ms Regan,  
Thank you for giving the Adirondack Mountain Club (ADK) the opportunity to comment on the proposed guidelines concerning ski trail development in the Forest Preserve.

The Adirondack Mountain Club (ADK) is dedicated to the conservation, preservation, and responsible recreational use of the New York State Forest Preserve and other parks, wild lands, and waters vital to our members and chapters. ADK represents over 28,000 members who enjoy hiking, canoeing, kayaking, cross-country skiing, camping, backpacking, biking, mountaineering, snowshoeing, and other "muscle-powered" outdoor activities in New York. We sponsor programs that range from teaching people to hike and paddle safely to repairing our state's peerless hiking trail network. We are advocates for responsible recreation and protection of the Forest Preserve, state parks and other wild lands.

We would like to acknowledge the agency for taking steps towards making trails in the Forest Preserve more skier-friendly, and ADK generally supports the outline and content of the proposed guidelines. However, we are concerned that the proposed guidelines do not conform to the Adirondack State Master Plan (APSLMP). The APSLMP must be amended before the proposed guidelines are implemented.

We are unable to endorse these guidelines unless there is a change in the Definitions section of the Adirondack Park State Land Master Plan (APSLMP) guidelines so that these proposed guidelines do not impact Foot Trails. Given that these guidelines apply to the definition of a Cross Country Ski Trail (CCST) as now defined in the

APSLMP, which states that a CCST has the dimension and character of a Foot Trail, ADK does not want these new proposed guideline dimensions to be considered equivalent to the character and dimension of a Foot Trail. The definition of a CCST should be tied to the proposed guidelines, but not tied to the definition of a Foot Trail. This could be accomplished by removing the word “dimensions,” through an amendment to the APSLMP, from the current definition of a CCST.

Further, we are concerned with several issues in the guidelines, and feel that the APA and the DEC must provide further explanation. Notably, the provisions for clearing width, height and the construction of skintracks need further review.

Without endorsing the proposed guidelines at this time, ADK generally supports the outline and content of the proposed guidelines and the changes in relation to the current NYS Department of Environmental Conservation (DEC) manual. The current dimensions for Nordic Skiing in the DEC manual are defined as 4ft in Wilderness and 8ft in Wild Forest. As such, the current dimensions do not accommodate backcountry skiing. Under the proposed guidelines, width and height of a trail may be cleared up to a maximum of 12ft in certain instances. The proposed guidelines allow clearing up to 12ft for width when the slope grade exceeds 10%, and up to 12 ft for height to allow for snowpack build up.

The specific construction of uphill skintracks concerns us. In the offseason hikers may be tempted to use these skintracks as an alternative “express trail” to ascend peaks. Hikers could cause damage to the skintrack resulting in erosion. ADK strongly encourages APA to outline how the agency plans to monitor the skintracks for inappropriate use and to educate hikers about avoiding these cleared pathways. Monitoring and education will be essential in order for the skintracks to remain useable by skiers. Summer use by hikers would cause serious erosion since the skintracks will not be designed or built for hiking or use without snow cover.

We generally support the outline and content of the proposed guidelines, but ADK does not endorse these guidelines at this time, unless and until there is a change in the Definitions section of the Adirondack Park State Land Master Plan (APSLMP) guidelines so that these proposed guidelines do not impact the definition of Foot Trails. ADK does support the intent of the efforts of the APA and DEC in their

work to help make backcountry and Nordic skiing more accessible. However, implementing the proposed guidelines would require an amendment to the APSLMP. We must also ensure that skiing and the use of ski trails have the smallest environmental impact possible so that future generations may also enjoy these recreational resources and activities.

Sincerely,

A handwritten signature in black ink, appearing to read "Neil F. Woodworth". The signature is fluid and cursive, with a long horizontal stroke at the end.
